PROFESSIONAL SUMMARY

Computer Science undergraduate focused on Java Full Stack Development with hands-on experience building RESTful APIs using Java and Spring Boot, developing interactive frontends with React, and working with PostgreSQL and MongoDB. Experienced in implementing authentication, designing database schemas, and developing full-stack web applications. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming and DBMS.

EDUCATION

Bachelor of Engineering in Computer Science and Engineering — 2023–2027
JSS Academy of Technical Education, Bengaluru | **CGPA: 8.43**

TECHNICAL SKILLS

Programming: Java, JavaScript, C, Python
Backend: Spring Boot, Spring MVC, Spring Data JPA, RESTful APIs, JWT, Spring Security
Databases: PostgreSQL, MongoDB, MongoDB Atlas, MySQL
Frontend: React.js, TypeScript, HTML5, CSS3, Tailwind CSS
AI / Computer Vision: Spring AI, RAG, YOLOv8, InsightFace, OpenCV
Tools: Git, GitHub, Maven, Postman, VS Code
Core CS: Data Structures and Algorithms, OOP, DBMS

PROJECTS

Memento | Java 21, Spring Boot 3, Spring AI, PostgreSQL 16 + pgvector, React, TypeScript, JWT
Built a RAG document knowledge workspace supporting PDF, DOCX and TXT uploads, document chunking, embeddings, source-grounded AI chat and authenticated SSE streaming.

VisionMate — AI-Powered Assistive Smart Glasses | Python, YOLOv8, InsightFace, Raspberry Pi, Flask, WebSocket, SQLite
Developed an assistive smart-glasses system with real-time object detection, face recognition, object memory, obstacle guidance, GPS navigation and audio feedback. Raspberry Pi camera frames and sensor data communicate wirelessly with a laptop ML server.

JobNova | React, Spring Boot, MongoDB Atlas, JWT, Serper API
Developed a recruitment portal with recruiter and candidate workflows for job posting, job search, applications and application tracking; integrated REST APIs and role-based access.

JeevantaX | React, Spring Boot, MongoDB Atlas, Gemini API, OpenStreetMap
Developed a healthcare platform with appointment scheduling and electronic health records, integrating AI-assisted features and nearby hospital discovery.

Smart Expense Tracker System | MongoDB, Express.js, React, Node.js
Built a personal expense-tracking application using the MERN stack.

Real-Time Face Recognition | Python, OpenCV
Developed a computer-vision project focused on real-time face recognition.

MealRush | HTML5, CSS3, JavaScript
Built a food-related frontend web application using core web technologies.

ACHIEVEMENTS

Secured **3rd Place** in the JSS Academy of Technical Education hackathon by developing **ReferAI**, an AI-powered employee referral platform.
